DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Derflinger et al (US 7,067,191).

3. Derflinger teaches a substrate covered by a metal layer (2b) and another layer containing nitrogen (2a) and then a second metal layer (3) covered by a carbide layer (4b) and then covered with a hard carbon layer (4a) (see figure 5). The top carbon containing layer can be optionally replaced with a diamond like coating (column 4 line 45-55). The deposition method includes the formation nano-crystalline Carbides in an inert atmosphere (Column 6 line 30-40; and column 7 line 27-33).

4. The layers can comprise Ti or Cr and the nitride containing layer can comprise CrN (see claims 7, 8, and 10).

5. Regarding claims 10-12, the layers have the same thickness as applicant's claimed thickness (see ref. claims 25-43).

Art Unit: 1794

6. Regarding claims 13-15, given the substantial similarities of the compositions and thickness of the layers they would be expected to have substantially similar properties, and are thus anticipated by the reference.
